

BATTERY COOLING PIPE

Hot or not – it's transported safely.

Reliable thermal management for the battery: compact, flexible and customisable. For more efficiency, more safety and maximum performance, without compromising on sustainability.

Flexible pipe for heating and cooling

Whether cooling or heating: the flexible metallic pipes reliably transport the medium to where it is needed.

Compact, lightweight and robust

With wall thicknesses from 0.1 mm, we save space and weight – without compromising on temperature and fire resistance.

Modular design with a system

Customised for your vehicle design: individual connection techniques and the combination with thin-walled stainless steel plates enable complete cooling solutions.

The right partner for your solution.

Thanks to our modular system architecture, our piping systems can be flexibly integrated, customised and expanded. We support you from development to series production.
