

COOL REFLEX PLATE

# Staying in temperature. But **flexible.**

Whether hot or cold: our Cool Reflex Plate ensures the perfect temperature control of your battery modules. For stable performance, maximum service life and higher safety.

## ● Intelligent temperature control with a system

Reliable cooling and heating of cylindrical, prismatic without additional gap fillers.

## ● Wafer-thin & highly effective

For optimum integration with low weight: With stainless steel thicknesses from 0.1 mm, we combine the best heat transfer with minimum material usage and high level of security.

## ● Adaptable and durable

The solution adapts flexibly to your production tolerances and battery swelling. This ensures continuous cell contact, efficient thermal management and a longer service life.

## Strong solution, strong partner.

Made of 100% recyclable stainless steel, corrosion-resistant, high-temperature-resistant: we are there for you with these and many other solutions from development to series production.
